Unit 6, Lesson 19

Expanding and Factoring

Let's use the distributive property to write expressions in different ways.

19.1 Number Talk: Parentheses

Find the value of each expression mentally.

$$2 + 3 \cdot 4$$

$$(2 + 3)(4)$$

$$2 - 3 \cdot 4$$

$$2 - (3 + 4)$$

19.2 Factoring and Expanding with Negative Numbers

In each row, write the equivalent expression. If you get stuck, use a diagram to organize your work. The first row is provided as an example. Diagrams are provided for the first three rows.

| | | | | | | | | | | | | | | | | | | | |
|--|-----|-----|----|-----|----|---|---|----|---|--|--|--|--|--|--|--|---|----|-----|
| <table style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding: 0 10px;">5</td> <td style="padding: 0 10px;">-2y</td> </tr> <tr> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">-3</td> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">-15</td> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">6y</td> </tr> </table> | 5 | -2y | -3 | -15 | 6y | <table style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding: 0 10px;">a</td> <td style="padding: 0 10px;">-6</td> </tr> <tr> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">5</td> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;"></td> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;"></td> </tr> </table> | a | -6 | 5 | | | <table style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding: 0 10px;"></td> <td style="padding: 0 10px;"></td> </tr> <tr> <td style="border: 1px dashed black; padding: 5px; width: 40px; height: 40px;"></td> <td style="border: 1px dashed black; padding: 5px; width: 40px; height: 40px;"></td> </tr> <tr> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">2</td> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">6a</td> <td style="border: 1px solid black; padding: 5px; width: 40px; height: 40px;">-2b</td> </tr> </table> | | | | | 2 | 6a | -2b |

Are you ready for more?

Expand to create an equivalent expression that uses the fewest number of terms:

$\left(\left(\left(x + 1\right) \frac{1}{2}\right) + 1\right) \frac{1}{2} + 1$. If we wrote a new expression following the same pattern so

that there were 20 sets of parentheses, how could it be expanded into an equivalent expression that uses the fewest number of terms?

Lesson 19 Summary

We can use properties of operations in different ways to rewrite expressions and create equivalent expressions. We have already seen that we can use the distributive property to expand an expression, for example $3(x + 5) = 3x + 15$. We can also use the distributive property in the other direction and factor an expression, for example $8x + 12 = 4(2x + 3)$.

We can organize the work of using distributive property to rewrite the expression $12x - 8$. In this case we know the product and need to find the factors.

The terms of the product go inside:

We look at the expressions and think about a factor they have in common. $12x$ and -8 each have a factor of 4. We place the common factor on one side of the large rectangle:

Now we think: "4 times *what* is $12x$?" "4 times *what* is -8 ?" and write the other factors on the other side of the rectangle:

So, $12x - 8$ is equivalent to $4(3x - 2)$.
